LIVE PHYSICAL COUNT

Arturo and helpers - production continues

1. Start an area. Write Area, date, Counter and actual Start time before counting; write End time when finished. On every row write time counted (HH:MM), exact printed lot, quantity and unit, Location and Bin ID if marked. If another area needs the same item, copy a blank sheet and assign a new sheet/row ID. Do not invent official location names.

2. Record every movement promptly. Every make, pack, shipment, receipt, transfer, adjustment or other movement during count days must be entered in FL as it happens, or with its true occurred time. No end-of-day batch entry. If FL cannot record a location-only move, log it immediately on "Moved during count"; never invent a stock adjustment for an internal move.

3. Tag counted stock. Mark each counted pallet/container COUNTED with sheet/row and time. For any move between a counted and uncounted area, in either direction, log item, lot, quantity/unit, from/to, time and tag ID. Production pulls still need their normal FL movement with the true time. The transfer log supplements FL; it does not replace it.

4. Avoid doubles and omissions. Try to count every location of an item in the same session. Each area's rows keep their own times. Check tags before recounting a pallet. If you are unsure, count it and tick the duplicate column. Add a labeled duplicate tick column to older paper copies. Only a tick marks a suspected duplicate; note text and repeated tags do not. The office must review ticked rows and keep at least one row per group. See the [transcriber guide](tool-guide.md) for the updated CSV template.

5. Use the right units. Ingredients/bulk: net lb. Without a scale weight, tick Estimated; opened bags/pails are estimated to the nearest 5 lb. Subtract known tare only; note unknown tare. Finished goods: whole cases plus loose packs as "X of Y". Packaging: pieces/units, with package conversion in notes. Container WIP: count containers, and note weight separately if measured.

6. Unreadable or missing lot? Use an Unidentified lot row: leave lot blank, write quantity/unit, description and location. Do not guess or create a lot. Use the Other sheet for items absent from the catalog, including labels and supplies. Blank rows do not mean zero.

7. Sunshine pouches are ordinary finished-goods counts: SKU, physical lot, quantity and location. Only copy a physical hold/sold/customer tag if present. Do not decide ownership or invoicing on the floor. Record each physical stack once.

8. Finish and hand in. Photograph every page and movement log, then transcribe without overwriting originals. Return the sheet register. Mark a product's coverage complete only after all its locations have been searched; record actual completion time. The owner resolves movement timing, duplicates and missing identities before approving any adjustment. Production need not wait for the whole review. No fixed waiting period after count: prepare the reset as soon as reviewed.

9. Cutover morning: pause posting per area. When the office says your area is being loaded, stop entering FL movements for that area's items (15-30 minutes). Wait until the office reads back the receipt numbers (ADJ-/FND-) against your sheet, then resume. Other areas keep working.
